

Do You or a Family Member Have Diabetes?

The Burden of Diabetes Among Native Hawaiians and Pacific Islanders

- Diabetes is a common, complex disease in both the US and across the entire world.
- Native Hawaiians and Pacific Islanders have among the world's highest burden of this disease.

Research to Better Understand the Causes of Diabetes

- While individuals of Native Hawaiian and Pacific Islander ancestry are among the most affected with diabetes, they have been vastly underrepresented in research to better understand its causes.
- To advance this area, we established the **Utah Pacific Islander Diabetes Study** to identify the risk factors that lead to diabetes in Native Hawaiians and Pacific Islanders and to *better prevent, diagnose, and treat this disease*.

Who is Eligible to Participate in This Study?

- Individuals who are over 18 years old
- Individuals who have diabetes or have a family member with diabetes

What Does it Mean to Participate?

- A study coordinator will meet with you one time at a convenient time and place
- You will:
 - Complete a short medical and family history questionnaire
 - Provide a blood and/or urine sample
- There is **no cost** to participate
- Volunteers will receive \$25 compensation in the form of a Visa gift card

Goals of the Utah Pacific Islander Diabetes Study

- To engage members of Utah's Native Hawaiian and Pacific Islander community in research aimed and advancing our understanding of diabetes.
- To identify the risk factors that lead to diabetes in Native Hawaiians and Pacific Islanders to *better prevent, diagnose, and treat this disease*.
- To help identify those who are at risk of developing diabetes to improve prevention and treatment of diabetes and its associated complications.
